his own solution (not, of course, in isolation, but in correspondence with the teacher and other pupils) and find his own way out he will not learn, not even if he can recite some correct answer with a hundred percent accuracy<sup>4</sup> The case analysis method brings reality into the classroom When developed and presented effectively,

### **Introduction to Python - Harvard University**

- Binding a variable in Python means setting a name to hold a reference to some object
- Assignment creates references, not copies
- Names in Python do not have an intrinsic type Objects have types
- Python determines the type of the reference automatically based on the data object assigned to it
